## fault location unearthed IT systems

Our experts go on site and help you to check the functioning of the Insulation Monitoring Device (IMD), to measure the insulation of your installation and to detect and localize faults up to the end feeders/lines.

### Key points

- > Using the latest generation of portable insulation fault location tools with the Ohm Scanner technology
- > Insulation mapping of the installation

### Benefits

- > Reduces fault localization time
- > Analysis of failures and fault origins
- > Ensures optimal continuity of service
- > Gives you a clear picture of the level of insulation from the mains supply to the end feeders
